ProSlip

Non-slip to prevent movement of goods

Why should I use non-slip?

ProSlip Rubber

- To prevent the load from shifting during transport.
- To improve the stability of palletized products.
- Suitable for road, maritime, air or rail transport.
- Prevents goods from tilting.
- Can be used for any type of load.

ProSlip Paper

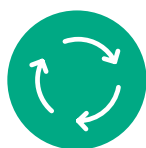

At J2 Servid we have two models of non-slip to protect the load and prevent it from moving during transport. We have one made of rubber (ProSlip Rubber) to place under the pallet, between pallets and on the floor of the truck or the container. And the other made of paper (ProSlip Paper) to place between the different layers of the pallet.

Advantages of the Proslip range

Recyclable

Promote environmental policies

Reusable

Thanks to its durability

Effective

Tested on hundreds of road journeys

Easy installation

No training or tools required.

Resistant

Maintains its properties at extreme temperatures

Placing the rubber non-slip

Placing the pallet over the non-slip rubber

Placing of the non-slip interlayer paper

Example of damage without non-slip paper

ProSlip Rubber

The rubber non-slip for transport are products designed to prevent the slipping of objects stored on shelves or transported by any kind of transport.

These non-slip models are made of rubber, this material provides greater resistance to slipping and a better grip of the goods, they are ideal for road transport, but also very useful for securing cargo in maritime, air or rail transport.

They are very easy and quick to place, as they are placed directly on the floor of the truck, container or over the goods.

All rubber non-slip for truck transport distributed by J2 Servid have been approved and certified with practical and real tests. They comply with the German VDI 2700 and UNE 12195-1 standards.

The standard sizes for this product are: 800x150x3mm, 5000x250x8mm and 13600x150x3mm.

We have others available that are not as common as these and, in addition, this product can be custom-made according to the customer's needs.

ProSlip Paper

ProSlip Paper non-slip interlayers are sheets of paper of different weights or thicknesses, of the size of a European pallet/europallet (800x1200 mm) or a universal pallet/US pallet/isopalet (1000x12000 mm).

These sheets, impregnated with an exclusive and innovative non-slip treatment, are placed between the different layers of goods on the pallet to prevent the load from slipping once it has been palletized. They can be used on any type of packaging.

As it is made of paper, it is 100% recyclable and suitable for use in the food industry. It has a high coefficient of friction and can withstand up to 45° of inclination without the palletized load slipping.

With the use of the non-slip paper interlayer, we will improve the stability of the goods once they have been palletized, and we will avoid possible falls, thereby reducing the number of complaints due to losses or breakage during transport.
