VOID FILLERS

Niupack

The transport protection system that prevents the movement of loads.

1 Economic

2 Effective

3 Resistant

4 Recyclable

Unique

Fast

Patented

Foldable

Niupack Top

Niupack Top is a fast-filling system to cover the gaps between pallets inside the truck. With Niupack Top we will prevent the merchandise from rocking or tipping, which can cause damage, avoiding the domino effect.

This system will be really useful when we are faced with a load that does not cover the entire from the base of the pallet. It is mainly aimed at sectors with a large consumption such as food, beverages and the non-food sector.

Niupack Large

Ideal system for shipping containers and for filling large gaps between the pallets. Quick installation and easy handling, very resistant and 100% ecological.

Niupack Large is a very easy and fast system to use. It is an ecological alternative to current solutions.

Niupack Side

It is a Niupack model very similar to the Top model but with the peculiarity of the top cover is shorter and foldable.

This cover allows an easy placement inside the stretch film and being able to load pallets easily with the Niupack Side inside the film.

Niupack Double

Ideal for covering existing side gaps when you have to place a pallet in the center of the truck/container to compensate for the axle weight distribution. Also used to gain space longitudinally in containers.

The Niupack Double is available in different resistance formats.

Niupack Box

This is a patented and highly resistant folding honeycomb panel system. It has the advantage that can be folded for transport or storage, and thus save a lot of space in transport and storage. Available in different sizes.

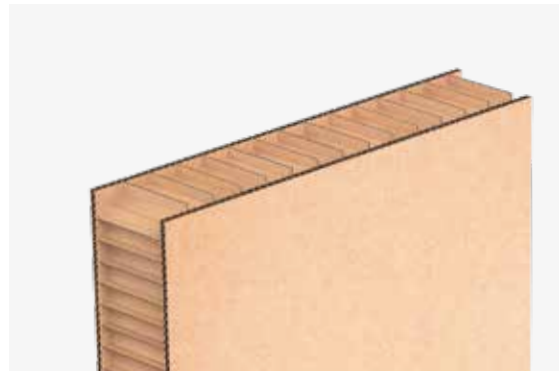

Niupack Block

Custom-made honeycomb cardboard blocks, ideal system for rigid goods. Avoid impacts and collisions between the pallets. Mainly aimed at sectors of machinery, electronics and small packs.

Niupack Panel

Rigid void fill system for containers and trucks that consists of a large and corrugated cardboard panel with a honeycomb structure. Ideal to protect the sides of the pallet and to separate and stabilize stacked pallets.

CERTIFICATES

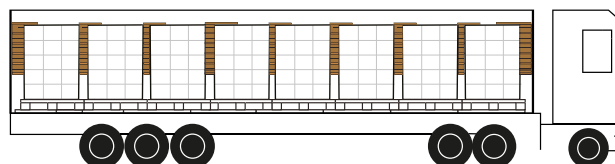

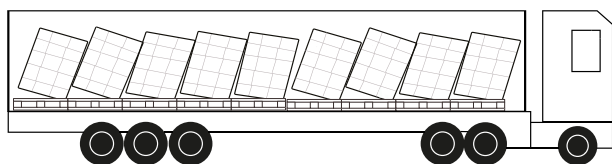

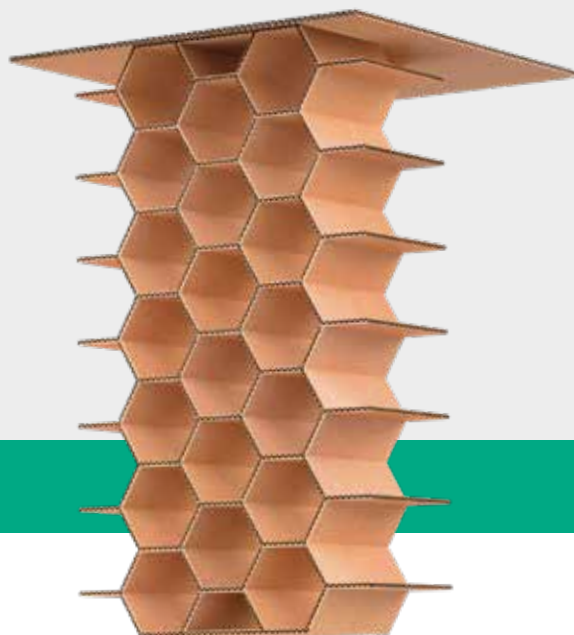

At J2 Servid we have the certifications FSC® (FSC-C180212) and PEFC (PEFC/14-33-00104), which allow us to prove that the raw material of forest origin, that we use in our company, comes from managed forests according to sustainability criteria. In this way, we assure our customers the sustainability of the product that we are offering.

If you want your certified Niupacks, do not hesitate to ask for them with certification.

Niupack

The best way to fill the gaps between pallets

Niupack

Niupack is the definitive solution to displacements and falls of goods during transport thanks to the fact that it fills the gaps between the pallets, and thus avoid movements and tilting of goods during transport.

It looks like a piece of corrugated cardboard with a folding honeycomb. This innovative solution for filling gaps has been developed entirely by J2 Servid.

	Type	Thickness
Niupack Top and Large	Niupack TOP S60	60mm.
	Niupack TOP S75	75mm.
	Niupack TOP S85	85mm.
	Niupack TOP S100	100mm.
	Niupack TOP S120	120mm.
	Niupack TOP S150	150mm.
	Niupack LARGE L100	100mm.
	Niupack LARGE I150	150mm.

Custom manufacturing

A wide range of Niupack models that can solve the problem of the load movement during transport.

Any model can be manufactured to the customer's needs.
