# ProControl

ProControl recorders are used to record temperature and humidity fluctuations, light and the location during the transport of goods.

## ProControl Temperature

The temperature data logger has a lifetime of 2 years and 6 months in operation. The possibility to activate two alarms, one for high temperature and one for low temperature. The information can be viewed via the USB connection, where a PDF is generated or via the software tool for more details.

This system is widely used in the transport of goods in containers. Its temperature measurement range is between  $-30^{\circ}\text{C}$  and  $+60^{\circ}\text{C}$ . It incorporates all the advanced hardware circuits to guarantee maximum data security and has up to 8,000 memory points.

## ProControl Humidity + T

The temperature and humidity data logger has a lifetime of 2 years and 6 months in operation. The possibility to activate four alarms, for high temperature, low temperature, low humidity and high humidity. The information can be viewed via the USB connection, where a PDF is generated or via the software tool for more details.

This system is widely used in the transport of goods in containers. Its temperature measurement range is between  $-30^{\circ}\text{C}$  and  $+60^{\circ}\text{C}$ . It incorporates all the advanced hardware circuits to guarantee maximum data security and has up to 8,000 memory points.

## ProControl V5C Pro

The ProControl V5C PRO is a single-use data logger with up to 120 days of real-time monitoring, offering high-precision location tracking ( $\pm 10$  m) and complete control over shipping conditions: temperature, humidity, impacts, tilt, movement, and location. It integrates immediate alerts and marine tracking with ETA/ETD, and is easily managed via the app and platform, providing visibility, traceability, and control for sensitive and high-value goods.
